

**ABSTRACT OF THE DISCLOSURE**

5       A head support device for supporting the head of a person in  
an upright position against the back support of a chair. The head  
support device includes a flexible panel having a first side and a  
second side. The panel has a first edge, a second edge, a third  
edge, and a fourth edge wherein the first and second edges are  
10   positioned opposite of each other. The third and fourth edges  
extend outward in opposite directions at junctures with the first and  
second edges such that four flaps are defined. A fastening means  
removably fastens two flaps on the third edge together and the two  
flaps one the fourth edge together. A securing means removably  
15   secures the first side of the panel to the chair.
